PROFILE

BS Computer Science graduate (IISAT, 2026) specializing in Flutter mobile development with Firebase and UI/UX design. Led team projects from design through delivery, including a dual-portal Flutter application for electricity theft and fault detection, and have been teaching since 2023. Looking to apply my technical skills to real-world projects.

PROJECTS

GridEye — Electricity Theft & Fault Detection System — **2025 – 2026**

Final Year Project, IISAT | Team Lead, Team of 3 | Supervised by Ms. Areej Waseem | Flutter, Dart, Firebase, Python

- Designed and built a dual-portal Flutter app (utility admin and consumer) with real-time Firebase data sync, and owned all UI/UX decisions.
- Integrated live anomaly alerts, consumption readings and meter health status from the Python backend into the app via Firebase Realtime Database.
- Co-developed with a backend teammate a two-stage detection system on SGCC smart meter data: Z-Score flags suspicious energy patterns, then a classifier separates technical faults from intentional theft.
- Admin portal shows geo-tagged loss locations for field deployment; consumer portal shows usage insights and fault alerts.

Predictive Maintenance & Anomaly Detection — **7th Semester**

Course Project | Team Lead, Team of 3 | Python, Keras, Pandas, NumPy

- Trained an LSTM Autoencoder on 220,000+ data points across 51 industrial sensor streams, with Three-Sigma thresholding for failure alerts.

Research: Distributed Deepfake Detection — **6th Semester**

Academic Research | Parallel & Distributed Computing

- Authored a technical paper reviewing 5 deepfake detection frameworks and proposed a distributed parallel AI architecture for real-time audio and video detection.

Academic Projects (C++, Java, OOP, SRS) — **1st – 3rd Semester**

- Result Management System (C++): console-based GPA calculator with OOP design and record querying.
- Brick Breaker Game (Java): multi-level arcade game with collision physics, power-ups and game-loop logic.
- HR Management System SRS: complete Software Requirements Specification with user roles, data flows and security protocols.

EXPERIENCE

Computer Science Instructor — Ghakkhar Institute of Technology (GIT) — **Sep 2024 – Nov 2024**

- Delivered web development instruction over three months and supported students in understanding course material; performance commended by institute management.

Trainee — Dev Valley (Software House) — **Sep 2024 – Nov 2024**

- Completed three months of hands-on training in C++ and Java.

Academy Instructor — Home Academy — **2023 – Present**

- Teach Grades 9–12 in Biology, Chemistry, Physics and Computer Science, explaining complex concepts in simple terms and supporting exam preparation.

EDUCATION

BS Computer Science — IISAT, Gujranwala — **2022 – 2026**

Intermediate (Pre-Medical) — Quaid-e-Azam Public College — **2020 – 2022**

Certification: Apna StartUp Web Development — **HTML, CSS, WordPress, Wix**

SKILLS

Mobile: Flutter, Dart, Android Studio
Backend / Cloud: Firebase Realtime Database, Firestore, Firebase Authentication
Frontend & Design: HTML, CSS, UI/UX Design, Material Design, Canva
Programming: C++, Java, Python (basic)
Tools: Git & GitHub, VS Code, WordPress, Wix
